One-Step and Two-Step Equation Worksheets: Inverse Operations

Reverse-Order Rule for Two-Step Equations

Arrows from the variable outward show reverse order: undo addition/subtraction first, then multiplication/division.

Step	Operation acting on variable	Inverse operation to apply	Resulting line
1	Addition or subtraction	Undo addition or subtraction on both sides	Simplified one-step equation
2	Multiplication or division	Undo multiplication or division on both sides	Variable isolated
Example: 3x + 4 = 19	+4 then ×3	Subtract 4 from both sides	3x = 15
Example continued	×3	Divide both sides by 3	x = 5
