Draw a Forest Scene: Tree Trunk and Canopy Construction

Original worked example / unchanged complete key

Prompt: Construct one tree with a trunk height of 8 units, canopy width 6 units, and canopy height 5 units. Use three overlapping canopy shapes and one root flare.

Answer: Draw a baseline and midline 8 units apart. Sketch a tapered trunk from baseline to midline. Add one root flare at the base. Above the trunk, draw three overlapping rounded shapes totaling about 6 units wide and 5 units tall. Outline the canopy, keep the trunk visible through a gap, and erase construction lines.
