Graffiti Lettering Basics: Block, Bubble, and Wildstyle

Original worked example / unchanged complete key

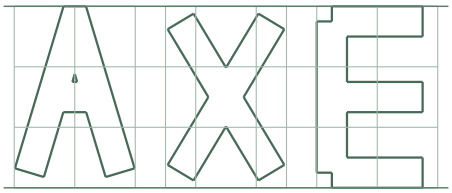

Prompt: Draw the word 'AXE' in block style on a grid with x-height 3 squares. Each square is 1 unit. Use stroke weight 0.5 unit. Describe the skeleton and check spacing.

Answer: Skeletons: A is two diagonals meeting at top plus a crossbar; X is two crossing diagonals; E is a vertical plus three horizontals. Place A in squares 1-2, X in squares 3-4, E in squares 5-6. Thicken all main strokes to 0.5 unit. Check: verticals parallel, counters open, letters fit within 6 squares with even gaps.

Worked reference / reference

Owned lettering examples / 1 selected unit = 8 mm on paper / printed at actual size

AXE: x-height 3 selected units, stroke band 0.5 unit. Equal chosen frames and a consistent half-unit gap keep the three skeletons readable.
