Draw a Muscular Male Torso: Mass Shapes and Proportion Landmarks

Topic reference / ordinary illustration

Ordinary topic reference. Hypothetical dimensions in the four tasks are supplied in their own text; this illustration is not their measured answer.

Draw a Muscular Male Torso: Mass Shapes and Proportion Landmarks

Worked example / complete source key

A student draws a torso 16 cm tall. They divide it into four equal bands. Where should the top of the pelvis sit, and how tall is each band?

Answer: Each band is 16 ÷ 4 = 4 cm tall. The top of the pelvis sits at the boundary between the third and fourth bands, which is 12 cm down from the top of the torso.
