Drawing a Girl: Pose, Proportion, and Contour Studies

Original worked example / unchanged complete key

Prompt: A standing girl figure is 14 cm from baseline to midline. One head unit measures 2 cm. The crotch is marked at 7 cm from baseline. Check the head unit count and the halfway guide.

Answer: Head unit count: 14 ÷ 2 = 7 head units. Halfway guide: 14 ÷ 2 = 7 cm, which matches the crotch mark. The figure is seven head units tall and the halfway guide is consistent with the mark. If the pose changes to 12 cm with the same 2 cm unit, the count becomes six head units, so re-check landmarks.
