Dog Face Drawing: Feature Placement Guide

Original tasks 1, 2 / independent work

Task 1

A head shape is 10 cm tall. The eye line is at the middle. You place the top of the nose one-third of the way from the eye line to the chin. Calculate the distance from the eye line to the top of the nose.

Task 2

On a front-facing dog face, each eye is 2 cm wide. The gap between the eyes is one eye-width. What is the total width from the left edge of the left eye to the right edge of the right eye?

Dog Face Drawing: Feature Placement Guide

Original tasks 3, 4 / independent work

Task 3

A head shape is 14 cm tall. The eye line is at the middle. The top of the nose is 2 cm below the eye line. What fraction of the distance from the eye line to the chin is the nose-top distance?

Task 4

You draw a dog face with floppy ears. Each ear base is 3 cm from the midline, and the two ear bases are at the same height. The head is 12 cm wide. How far is each ear base from the nearest side of the head?
