Angel Drawing Easy: Wings, Robe, and Halo Step by Step

Topic reference / ordinary illustration

Ordinary topic reference. Hypothetical dimensions in the four tasks are supplied in their own text; this illustration is not their measured answer.

Angel Drawing Easy: Wings, Robe, and Halo Step by Step

Worked example / complete source key

Using a 12-unit figure height, place the head, halo, shoulders, and robe width marks. State the unit positions and widths, then describe one check.

Answer: Head oval from 0.5 to 3.5 units on the center line. Halo center at 1.5 units on the center line, outer diameter 3 units, inner diameter 2 units. Shoulders at the 4-unit mark, about 4 units wide. Robe widths: 4 units at the 4-unit mark, 6 units at the 8-unit mark, 8 units at the 12-unit mark. Check: the robe width increases by 2 units at each checkpoint, and the halo's bottom edge sits at 0.0 units, leaving a 0.5-unit gap between the halo's bottom edge and the head top at 0.5 units.

Reason: The positions follow the three-band division of the 12-unit height. The halo is separated from the head to keep the silhouette clear. The robe widths increase steadily so the figure reads as a widening robe rather than a block.

Check: Measure the gap between the halo's bottom edge (1.5 minus 1.5 equals 0.0 units) and the head top (0.5 units); the gap is 0.5 units, so the ring clears the head with a visible gap. Measure the three robe widths; they should be 4, 6, and 8 units in this example.
