Soccer Player Drawing: Action Pose Construction and Kit Detail

Original worked example / unchanged complete key

Prompt: Draw a soccer player in a running pose moving to the right. Use a spine lean of 8 degrees forward, left thigh 25 degrees forward, left knee bent 40 degrees, right thigh 15 degrees back, right knee bent 20 degrees, left arm 35 degrees back, right arm 25 degrees forward. Add jersey, shorts, socks, and cleats using the convention. Check balance with a vertical line from the head to the support foot.

Answer: A completed drawing shows a figure leaning slightly right, with the left leg forward and bent, right leg trailing, arms opposite the legs. The support foot is the left foot; the vertical line from the head falls near it. Kit lines follow the torso and limbs, and joint marks are visible until final. Angles match the given values within a few degrees by eye.
