# Face Shape Drawing: Compare Oval, Square and Heart Outlines

Original worked example / unchanged complete key

Prompt: On a 12 cm by 16 cm rectangle with midlines and third lines, draw an oval outline and mark the eye line, nose base and mouth line. Then state one check for symmetry.

Answer: The oval touches the top and bottom marks, stays within the 12 cm width, and is widest near the horizontal midline. Eye line is at the horizontal midline, nose base at the lower third line, mouth line halfway between nose base and bottom. Symmetry check: at the middle height, the left and right distances from the vertical midline are equal (for example, 4 cm each, hypothetical).
