Draw Mount Everest: Ridge Lines, Snow Bands, and Base Camp Placement

Original worked example / unchanged complete key

Prompt: Draw a mountain study with a summit point, two ridge lines, three snow bands, and a base camp marker offset to the left. Use a base line 12 cm wide and a summit 8 cm above the base line. These are hypothetical example measurements.

Answer: Mark a summit 8 cm above the center of a 12 cm base line. Draw left and right silhouette edges. Add one main ridge from summit toward the left face and a secondary ridge toward the right face. Mark three elevation levels on the ridge lines and draw short parallel strokes within each band, following the slope. Place a small tent triangle 2 cm left of center on the base line. Darken ridge lines, lighten band strokes, and erase armature marks. The drawing shows a clear summit, two ridge lines, three snow bands, and an offset base camp marker.
