Easy Halloween Drawing: Stylized Bat with Wings and Fangs

Original worked example / unchanged complete key

Prompt: A student draws a body oval 4 cm tall and 2 cm wide, a head circle 2 cm wide, and two wings that each extend 1 cm from the body. The fangs are 1 cm long on a 2 cm head. Using the lesson convention, identify two checkable problems and state a fix for each.

Answer: Problem one: each wing is only 1 cm wide while the body is 2 cm wide, so the wings are too short under the body-width guide. Fix: extend each wing outward until it is about 2 cm wide. Problem two: the fangs are 1 cm long on a 2 cm head, which is about half the head height rather than the suggested one-third. Fix: shorten each fang to about 0.7 cm, keeping both inside the mouth width and hanging from the upper lip line. These numerical values are hypothetical examples for checking, not fixed standards.
