Mule Deer Drawing: Body, Ear, and Forked Antler Construction

Ordinary topic reference / separately checked pixels

Mule-deer construction / all units are hypothetical classroom choices / labelled mm print 1:1

U = 2 cm. Body 7 cm; shoulder 5 cm; four legs 2.4 cm. Three oval widths use chosen 1 U, 1.7 U, 1.7 U; each next oval overlaps the preceding width by one third, giving exactly 3.5 U overall. Ear 1.6 x 0.9 cm; main antler path 3 cm and each first branch path 1 cm. Head unit means its nose-to-back horizontal span. All values are hypothetical.

Mule Deer Drawing: Body, Ear, and Forked Antler Construction

Original worked example / unchanged complete key

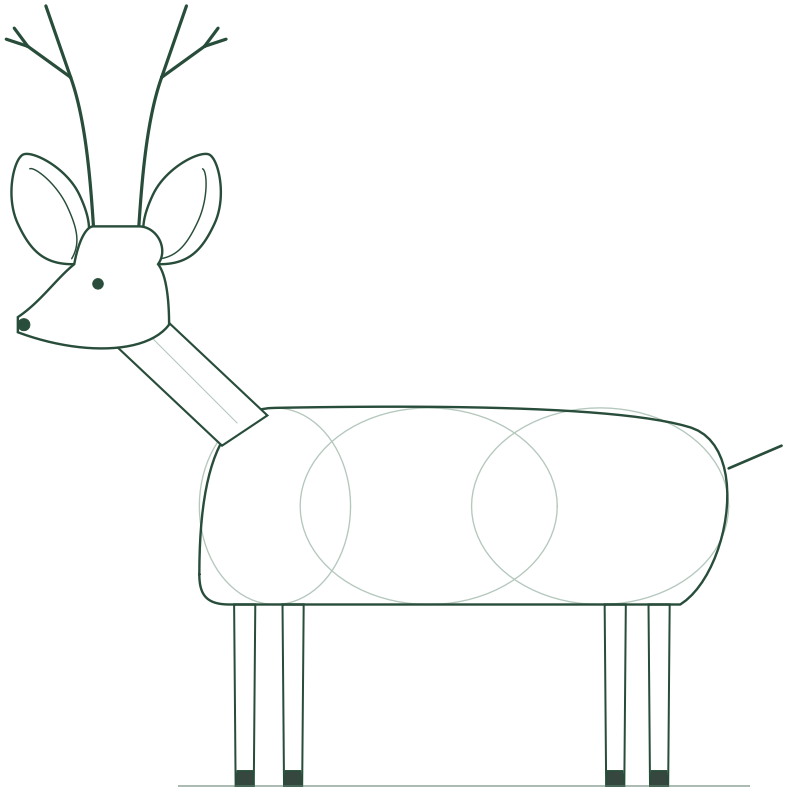

Prompt: Draw a side-view mule deer with body length 3.5 U, shoulder height 2.5 U, ear length 0.8 U, and one main fork plus one secondary fork per antler. Use U = 2 cm for this example.

Answer: Body length = 7 cm, shoulder height = 5 cm, ear length = 1.6 cm, ear width = 0.9 cm. Main beam length = 3 cm, each branch = 1 cm. The drawing shows a chest oval 2 cm wide and 2.6 cm tall, a midsection oval overlapping by one-third, and a hindquarters oval overlapping by one-third. Legs are 2.4 cm long, so body depth from back to belly is 5 − 2.4 = 2.6 cm, matching the chest oval height. Ears are teardrops 1.6 cm long and 0.9 cm wide at the midpoint. Antlers have a main beam 3 cm long with a fork at 2 cm, two branches of 1 cm each, and a secondary fork on the outward branch. Check: 3.5 × 2 = 7 cm; 2.5 × 2 = 5 cm; 0.8 × 2 = 1.6 cm; 0.45 × 2 = 0.9 cm; 1.5 × 2 = 3 cm; 0.5 × 2 = 1 cm; 1.2 × 2 = 2.4 cm; 1.3 × 2 = 2.6 cm.
