Raindrop Drawing: Falling and Splash Variants

Original worked example / unchanged complete key

Prompt: Draw one falling drop with a 4 cm axis and one splash with a 5 cm surface line and four arms. Check both against the convention.

Answer: The falling drop has its point at the top, a rounded bottom, and its widest part about 1.3 cm above the bottom. The splash has a dome touching the surface line and four separated arms starting at the dome. Both pass the checks; the drop is slightly plump but still valid.
