Suit and Tie Drawing: Lapels, Knot and Figure Construction

Original worked example / unchanged complete key

Prompt: A figure is 180 millimeters tall on paper. The shoulder line is 40 millimeters wide. The top button is placed at two-thirds of the distance from shoulder to waist, and the waist is 90 millimeters below the shoulder. Where is the top button, and what is a hypothetical lapel width at the chest if it is one-third of the shoulder width?

Answer: The top button is 60 millimeters below the shoulder line (two-thirds of 90 millimeters). A hypothetical lapel width at the chest is about 13 millimeters (one-third of 40 millimeters, rounded). These values are examples; measure your own drawing and adjust.
