Realistic Jellyfish Drawing: Bell Dome, Oral Arms, and Tentacles

Topic reference / ordinary illustration

Ordinary topic reference. Hypothetical dimensions in the four tasks are supplied in their own text; this illustration is not their measured answer.

Realistic Jellyfish Drawing: Bell Dome, Oral Arms, and Tentacles

Worked example / complete source key

A jellyfish drawing has a bell height of 6 units, oral arms of 3 units, and a longest tentacle of 9 units. Check the ratios and state whether the oral arms and tentacles follow the lesson rules.

Answer: Oral arm to bell ratio is 3 divided by 6, or 0.5; tentacle to bell ratio is 9 divided by 6, or 1.5. The oral arms are shorter than the bell height, and the tentacles are longer than the oral arms, so the drawing follows the stated rules.
