Draw a Reindeer: Antler Branching and Leg Construction

Original worked example / unchanged complete key

Prompt: A student draws a side-view reindeer with a body 2H long, a head 0.7H long, and four legs. The antlers have three forward tines and two upward tines per side. The hooves are 1 cm above the baseline. Identify one fix and one check.

Answer: Fix: lower the leg lines so all hooves meet the baseline. Check: measure the body length against the H unit to confirm it is about 2H.
