Facial Features Drawing: Eye, Nose, Ear and Mouth Construction

Original worked example / unchanged complete key

Prompt: Construct an eye in a hypothetical 6 cm by 6 cm frame. Baseline is at the bottom, midline is 3 cm above baseline. Mark inner corner at 1 cm from left, outer corner at 5 cm from left, iris center at 3 cm from left on the midline. Draw upper lid arc peaking 1 cm above midline, lower lid arc staying 1 cm above baseline, iris circle crossing the midline, and a centered pupil. Label landmarks and state one check.

Answer: Landmarks: inner corner (1 cm, baseline), outer corner (5 cm, baseline), iris center (3 cm, midline), upper lid peak (3 cm, 4 cm above baseline), lower lid low point (3 cm, 1 cm above baseline). Iris circle centered at 3 cm on midline with a hypothetical 1 cm radius crosses the midline. Pupil centered at iris center. Check: distance from iris center to inner corner is 2 cm; to outer corner is 2 cm; these are equal, so symmetry is acceptable. The iris crosses the midline, satisfying the convention.
