1 cm crown

2 cm front

Draw Male Hair: Compare Short Crop and Swept-Back Styles

Original worked example / unchanged complete key

Prompt: On an 8 cm tall head outline, draw a short crop with a 1 cm crown gap and forward strand arrows, then draw a swept style with a 2 cm front gap and backward arrows. Compare the two in one sentence.

Answer: The short crop shows a compact 1 cm gap at the crown with arrows pointing forward from the crown to the hairline. The swept style shows a 2 cm gap at the front with long curved arrows pointing backward toward the crown. Comparison: the swept style has greater volume and opposite strand flow.

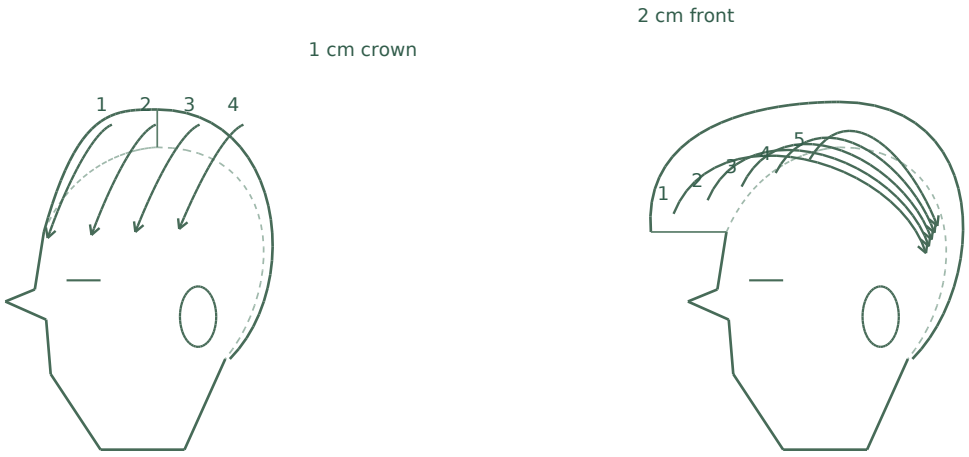

Reason: The gaps are measured from the scalp line to the hair surface, and arrows follow the defined root-to-tip convention. The comparison uses two checkable features: volume gap and arrow direction.

Check: Measure both gaps with a ruler; confirm the crop gap is about half the swept gap. Check that at least five arrows in each sketch follow the stated direction.

Worked reference / reference

Hair-profile flow / hypothetical gap and head lengths print 1:2 / face points left

Short crop: 1 cm crown gap and forward arrows. Swept front: 2 cm front gap and backward arrows. Gap means local scalp-to-hair surface distance, not an anatomical limit.
