Angled Face Drawing: Three-Quarter Feature Placement

Original worked example / unchanged complete key

Prompt: A blank angled head outline has the top of the skull at 0 cm, the eye line at 6 cm, the nose line at 10 cm, and the chin at 12 cm. Place the near ear and check the eye-to-nose and nose-to-chin distances.

Answer: The eye line is halfway between top and chin (6 cm of 12 cm). The eye-to-nose distance is 4 cm; the nose-to-chin distance is 2 cm. Place the near ear behind the jaw between 6 cm and 10 cm, so its height is about 4 cm. This matches the eye-to-nose distance in this hypothetical example.
