Draw Gremlin Characters with Feature Variations

Original worked example / unchanged complete key

Prompt: Combine a round head, frilled ears, and a stocky body. The head is two x-heights tall, ears are one x-height long, and the body is four x-heights tall. What is the total height?

Answer: Total height is six x-heights (2 + 4). Ears add one x-height to the sides but do not change total height. Measure your drawing to confirm six x-heights from baseline to top of head.
