Winged Heart Drawing: Symmetric Feather Construction

Topic reference / ordinary illustration

Ordinary topic reference. Hypothetical dimensions in the four tasks are supplied in their own text; this illustration is not their measured answer.

Winged Heart Drawing: Symmetric Feather Construction

Worked example / complete source key

A heart is 12 cm tall and 9 cm wide on a page. The upper wing attachment pair is 4 cm below the top point, and the lower pair is 6 cm below the top. The left inner row has five feathers. The first left feather tip is 3 cm from the axis at a height 4 cm below the top. Where should the matching right feather tip be placed?

Answer: The matching right feather tip should be 3 cm from the axis on the right side, at the same height of 4 cm below the top point. This mirrors the left tip and preserves symmetry.
