Timed Gesture Pose Drawing: Balance and Proportion Checks

Original worked example / unchanged complete key

Prompt: A described pose shows a standing figure with weight on the left foot and the right foot slightly forward. In a 60-second sketch, the head-to-hip distance counts 3 units and the hip-to-foot distance counts 4 units. The balance line passes through the left foot and the upper body center. Check the total height and state one proportion note.

Answer: Total height = 3 + 4 = 7 units. The lower body is longer than the upper body by 1 unit. The balance line is consistent with the left-foot support. Proportion note: keep the hip-to-foot distance at about 4 units when refining the sketch.
