Hand Gesture Drawing: Poses, Motion Lines, and Timed Practice

Original worked example / unchanged complete key

Prompt: Draw a waving gesture with a curved motion line. Use the palm block convention and label the wrist point, knuckle midline, and fingertip reach.

Answer: Draw a palm block two units wide and three units tall. Mark the knuckle midline across the top third. Add four tapered fingers slightly spread, reaching to the fingertip reach. Angle the thumb outward from the lower side. Tilt the wrist to the left. Add a curved arrow outside the silhouette, starting near the left wrist edge and arcing upward to show the wave direction. Label the wrist point at the bottom of the palm block, the knuckle midline across the top third, and the fingertip reach at the highest fingertip. Check that the arrow does not cross the palm block and that the three landmarks form a clear triangle.
