Relief Drawing: Raised Edges and Depth Cues

Original worked example / unchanged complete key

Prompt: Draw a raised rectangle on a 10 cm panel using a 3 mm offset and a 2 mm shadow band. Light comes from the upper left. Describe the lines and check the measurements.

Answer: Draw the panel outline. Draw the rectangle contour inside. Offset the contour to the lower right by 3 mm to show the side wall. Add a 2 mm shadow band outside the lower right edge only. Leave the upper left edge without shadow. Measure the offset at four points; all should be 3 mm. Measure the shadow band at the same points; all should be 2 mm. The shadow band is narrower than the offset, so the form reads as raised.
