Relief Drawing: Raised Edges and Depth Cues

Original task 1 / independent drawing and calculation

Task 1

On a 10 cm panel, draw a raised circle with a 4 mm offset and a 3 mm shadow band. Light is from the upper left. Describe where the shadow band goes and give one measurement check.

Keep the original task measurements. Use the full drawing sheet in this PDF for a response needing more room; use the stated paper size when a task specifies larger paper.

Relief Drawing: Raised Edges and Depth Cues

Original task 2 / independent drawing and calculation

Task 2

A raised square has a 5 mm offset on the lower right and a 6 mm shadow band. Is this consistent with the lesson? Explain and give a fix.

Keep the original task measurements. Use the full drawing sheet in this PDF for a response needing more room; use the stated paper size when a task specifies larger paper.

Relief Drawing: Raised Edges and Depth Cues

Original task 3 / independent drawing and calculation

Task 3

Draw two raised rectangles at the same height on one panel. Rectangle A has a 3 mm offset. Rectangle B has a 5 mm offset. What should you change and why?

Keep the original task measurements. Use the full drawing sheet in this PDF for a response needing more room; use the stated paper size when a task specifies larger paper.

Relief Drawing: Raised Edges and Depth Cues

Original task 4 / independent drawing and calculation

Task 4

On a 10 cm panel, draw a raised triangle with a 2 mm offset and a 2 mm shadow band. Light is from the upper left. Describe the shadow placement and one possible line style variation that still follows the convention.

Keep the original task measurements. Use the full drawing sheet in this PDF for a response needing more room; use the stated paper size when a task specifies larger paper.

Full drawing sheet / reusable blank workspace

Reusable full drawing sheet for Tasks 1 to 4. Print another copy when needed. Keep all original task measurements; if a task specifies larger paper, use that paper size.
