Drawing a Fisherman: Pose, Net, and Boat Context

Original worked example / unchanged complete key

Prompt: A fisherman stands facing right, casting a net with the right hand. The left hand pulls back near the hip. Draw the pose, net, and boat edge using eight head units. Use a cone net with an opening width of two head units and a boat edge below the hip line.

Answer: Draw a vertical gesture line and mark eight equal head units. Place the head oval at the top, shoulder line at one unit, hip line at four units, and knee line at about four and a half to five units. Draw a stance line with the right foot forward by one head unit and the left foot back. Add arm reach lines: right shoulder to right wrist reaching forward and slightly up, left shoulder to left wrist near the hip. Check that the right wrist is beyond the right elbow. Draw a cone net from the right wrist with an opening width of two head units, bottom edge curving downward at both ends, and three cords to the rim. Add short weight marks. Draw a gunwale curve behind the figure below the hip line, with one short vertical support and a light water line. Darken final lines and check pose, net, boat, proportion, and line control. All numerical values are hypothetical examples; measure your own paper and tools.
