Figure Drawing from a Posed Model: Proportion Landmarks and Annotated Sketch

Original tasks 1, 2 / independent work

Task 1

A described pose shows a figure 16 cm tall, weight on the left leg, right arm raised, right shoulder higher, right knee bent. State where the shoulder line tilts and where the bent knee sits relative to the weighted side.

Task 2

A figure is 20 cm tall on paper. The hip landmark is marked at 8 cm from the top. Using the midpoint convention, is the hip too high or too low, and by how many centimetres?

Figure Drawing from a Posed Model: Proportion Landmarks and Annotated Sketch

Original tasks 3, 4 / independent work

Task 3

You have drawn three landmark lines and four labels, but two leader lines cross. Describe two valid fixes that keep all labels readable.

Task 4

A sketch shows the shoulder line and hip line exactly parallel in a pose described as weight on one leg with the opposite arm raised. Name the likely error and the correction.
