Directed Drawing Bunny: Sequenced Shape Steps in Practice Boxes

Original tasks 1, 2, 3 / complete keys

Task 1

In box 1, draw a body oval 5 cm tall and 4 cm wide. State whether it matches the convention and why.

Answer: Yes, it matches because 5 cm is greater than 4 cm, so the oval is taller than wide.

Reason: The convention requires a taller-than-wide oval. Comparing the two measurements directly shows the oval meets that rule.

Check: Measure the height and width with a ruler and confirm height is greater than width.

Task 2

In box 2, draw a body oval and two ears. Ear A is 3 cm long and touches the oval. Ear B is 3 cm long but floats 1 cm above the oval. Which ear follows the convention?

Answer: Ear A follows the convention because it touches the top of the body oval. Ear B does not because it floats above the body.

Reason: The convention requires each ear to attach to the top of the oval. Touching versus floating is a visible, checkable difference.

Check: Look at the base of each ear and confirm it meets the oval line without a gap.

Task 3

In box 3, draw a body oval 6 cm wide and two paw circles each 2 cm across. Are the paws small enough under the convention?

Answer: Yes. Each paw is 2 cm across, which is smaller than the 6 cm body width, so the paws read as paws rather than a second body.

Reason: The convention says paws are small circles near the bottom of the body. Comparing paw width to body width gives a simple check.

Check: Measure the paw width and the body width and confirm the paw is clearly smaller.

Directed Drawing Bunny: Sequenced Shape Steps in Practice Boxes

Original tasks 4 / complete keys

Task 4

In the blank box, redraw the full bunny from memory. Then compare it to box 4 and list one shape to adjust next time.

Answer: A complete bunny with a body oval, two attached ears, two small paws, and face marks. The listed adjustment should name one specific shape, such as making the ears more even in length.

Reason: The blank-box redraw tests whether the sequence is remembered. Comparing to box 4 gives a concrete, checkable adjustment.

Check: Check that all four shape groups are present and that the named adjustment refers to a visible difference between the two drawings.

Source rubric / reflection

- [ ] Body oval is closed, centered, and taller than wide under the stated convention.
- [ ] Two ear shapes touch the top of the body oval and are similar in length.
- [ ] Two small paw circles sit near the bottom of the body oval.
- [ ] Face marks are present in box 4 and the blank box contains a full redraw.
- [ ] Shapes stay inside the boxes with a visible margin.
- [ ] Valid alternatives such as angled ears or a wider body are accepted if the convention is stated and applied consistently.

Reflection: What did you check, what did you change, and what will you try next?
