Draw Anger: Brow, Mouth and Posture Variations

Original worked example / unchanged complete key

Prompt: Draw a moderate anger expression using the convention. Use a brow angle of 15 degrees below horizontal, a gap reduced by half from a neutral gap of 20 units to 10 units, a pressed-line mouth 30 units wide, and a forward lean of 10 degrees from vertical. Label each feature and state the measured values.

Answer: The drawing shows a head outline with a baseline and eye midline. The inner brow ends are 15 degrees below horizontal and the gap is 10 units, half the neutral 20 units. The mouth is a pressed line 30 units wide centered on the midline. The shoulder line leans forward 10 degrees from vertical. Labels mark brow angle, gap, mouth width and lean. A viewer identifies anger from the lowered inner brows, pressed mouth and forward lean. Check: 20 minus 10 equals 10 units, a 50 percent gap reduction; the stated angle and lean match the drawn lines.
