Poultry Drawing: Compare Chicken and Duck Outlines

Original worked example / unchanged complete key

Prompt: A student draws a chicken body oval 6 cm long and a duck body oval 8 cm long on the same page. They want a fair comparison. What should they change, and what check confirms the fix?

Answer: Make the two body ovals the same length, for example 7 cm each. Then measure both ovals with a ruler to confirm equal length before darkening the outlines.
