Butler Drawing: Posture, Uniform Layers, and Serving Detail

Original tasks 1, 2 / independent work

Task 1

A butler figure is drawn eight head-heights tall. The head unit measures four centimeters. What is the total figure height in centimeters?

Task 2

You draw a tray with two glasses. The tray ellipse has a major axis of twelve centimeters. If the two glass circles are evenly spaced and each has a diameter of two centimeters, what is the total width occupied by the two glasses plus one equal gap between them?

Butler Drawing: Posture, Uniform Layers, and Serving Detail

Original tasks 3, 4 / independent work

Task 3

A butler is drawn with the waist at the fourth head-height mark and the knee at the sixth head-height mark. If the head unit is three centimeters, how many centimeters apart are the waist and knee marks?

Task 4

You draw a jacket hem at mid-thigh and a waistcoat hem at the waist. The waist is at the fourth head-height mark and mid-thigh is halfway between the fourth and fifth marks. If the head unit is five centimeters, how far below the waist is the jacket hem?
