Draw a Dog Side-Eye: Eye Direction, Brow Tilt, and Head Angle

Original worked example / unchanged complete key

Prompt: Draw a dog head with a mild side-eye glancing to the left. Use a forward head, half-shift pupils, and a slight down-tilt on the left brow.

Answer: Draw a rounded rectangle head about 8 cm wide and 6 cm tall (hypothetical example). Place the eye midline one-third down. Draw two almonds about 3 cm wide and 1.5 cm tall. Shift both pupils halfway toward the left corner. Lower the left upper lid by about 1 mm (hypothetical example). Tilt the left brow down toward the nose by about 10 degrees (hypothetical example) and keep the right brow neutral. Check that both pupils point left, remain inside the almonds, and the head stays forward.
