Fox Drawing Base: Head, Tail, and Body Construction

Original worked example / unchanged complete key

Prompt: Draw a fox base with a head wedge 4 cm wide at the top and 3 cm tall, a tail curve 6 cm long with a midpoint width of 2 cm, and body boxes 5 cm and 4 cm wide. Check the head symmetry and tail smoothness.

Answer: The head wedge is drawn with a 4 cm top line and a muzzle point 3 cm below. The ear triangles are 1.5 cm tall. The tail centerline curves gently from the rear of the body, with the midpoint 2 cm wide and the tip tapered. The chest box is 5 cm wide and the hip box 4 cm wide, overlapping by 1 cm. The back curve connects the top corners, and the belly line connects the bottom corners. Leg lines drop from the bottom corners. Symmetry check: both sides of the head wedge are within 2 mm. Tail check: the curve has one gentle bend and the tip is rounded.
