Remora Drawing: Sucker Disc and Fin Placement

Original tasks 1, 2 / independent work

Task 1

A remora drawing is 18 cm long. The head zone is one-third of the body. The sucker disc starts 1 cm behind the mouth and ends 2 cm before the gill line. Where does the disc end measured from the snout?

Task 2

A learner starts the long dorsal fin 2 cm from the snout on a 12 cm remora. The sucker disc ends 3.5 cm from the snout. Is the fin above the rear of the disc? Explain.

Remora Drawing: Sucker Disc and Fin Placement

Original tasks 3, 4 / independent work

Task 3

In a bottom view of a 10 cm remora, the sucker disc is drawn 5 cm long and centered on the head. The head zone is 3.3 cm. Is the disc too long? Use simple arithmetic.

Task 4

A side-view remora is 9 cm long. The pectoral fin is drawn 2 cm from the snout. The gill line is 3 cm from the snout. Is the pectoral fin correctly placed? Explain.
