Draw a Profile Mouth with Protruding Tongue: Four-Step Construction

Original worked example / unchanged complete key

Prompt: A learner draws a profile mouth on a 10 cm wide area. The mouth opening is 5 cm wide at the front and closes at the corners. The tongue extends 2.5 cm forward from the lip line and overlaps the lower lip by 2 mm. The jaw line sits 1 cm below the lower lip. Check the proportions using the stated convention.

Answer: The tongue length is half the mouth width (2.5 cm is half of 5 cm), which matches the hypothetical example. The overlap is 2 mm, which is visible but small. The jaw line is 1 cm below the lower lip, so it does not touch the lip contour. The drawing passes the structural checks: tapered opening, rounded tongue tip, and clear overlap.
