Draw Animals from Basic Shapes: Step-by-Step Construction

Original worked example / unchanged complete key

Prompt: Draw a simple dog from basic shapes. Use a horizontal oval for the body, a circle for the head, two triangles for ears, four rectangles for legs, and a thin rectangle for the tail. Refine into a recognizable dog.

Answer: First, draw a horizontal oval about 2 units long and 1 unit high. Place a circle of diameter 1 unit at the left end of the oval, overlapping slightly. Add two small triangles on top of the circle for ears. Draw four narrow rectangles below the oval for legs, two near the front and two near the back. Add a thin rectangle extending from the right end of the oval for the tail. Refine: smooth the neck between head and body, round the ear triangles, taper the legs and add small paws, and curve the tail. Add a small circle for the eye and a short line for the mouth. Erase construction lines. The result is a simple dog shape.
