Ink Flower Drawing: Petal and Leaf Stroke Practice

Original worked example / unchanged complete key

Prompt: On a panel with baseline at 0 mm and midline at 10 mm, draw one flower with five petals and two leaves. Use petal length 15 mm and leaf length 20 mm as hypothetical examples. Describe the stroke order and one check.

Answer: Mark a center point 30 mm above the baseline. Draw five petal strokes outward, alternating clockwise and counterclockwise, each about 15 mm long, lifting at the tip. Draw a stem downward to the baseline. Draw two leaf strokes from the stem toward their tips, each about 20 mm long, tapering by lifting. Check that petal tips do not cross and that leaf bases meet the stem cleanly.
