Draw an Upside-Down Bat: Grip, Hang Angle, and Folded Wings

Original worked example / unchanged complete key

Prompt: A bat hangs from a roost bar. The grip point is at the center of a 12 cm bar. The body hangs 6 cm below the bar, and the head sits 2 cm lower than the hips. Describe the drawing order and the key check.

Answer: Draw the 12 cm bar, mark the center grip, hook the toes over the bar, curve the body down 6 cm, place the head 2 cm below the hips, then tuck both wings with two or three creases. Check that the toe tips cross the bar and the head is the lowest shape.
