Taro Drawing: Tuber and Heart-Shaped Leaf Construction

Original worked example / unchanged complete key

Prompt: A learner draws a tuber four units tall and two units wide, with four ridge lines and six root hairs, then a leaf two units wide and one and a half units tall with a central vein and five side veins. Check the proportions and vein count.

Answer: The tuber ratio is 4:2, or 2:1, which is a valid tapered oval. Four ridges fall in the three-to-five range, and six root hairs are acceptable. The leaf is wider than tall, matching the heart outline. Five side veins branch from the central vein without crossing it, and the stem attaches at the leaf's top notch. The drawing meets the stated checks.
