Hare Drawing Easy: Ear, Hind-Leg and Body Proportions

Original worked example / unchanged complete key

Prompt: A side-view hare drawing has body length 8 cm, ear length 7 cm and hind-leg length 6 cm. Using the convention, evaluate the proportions and state one adjustment.

Answer: Ear-to-body ratio is 7/8 = 0.875, close to the practice target of 1.0. Hind-leg-to-body ratio is 6/8 = 0.75, matching the practice target. One reasonable adjustment is to lengthen the ears slightly to reach about 8 cm, or accept 7 cm as a valid stylistic alternative.

Reason: Both ratios are computed with the defined convention. The ear ratio is slightly under target but within a valid alternative range; the hind-leg ratio matches. The adjustment is optional and checkable by re-measuring.

Check: Re-measure ear base to tip and body neck base to tail base along the curve; divide ear by body and compare to 1.0.
