Rue Flower Drawing: Small Bloom Clusters and Lobed Leaves

Original worked example / unchanged complete key

Prompt: Draw a rue sprig on a 15 cm by 20 cm sheet with a main stem 12 cm long, three nodes at 3 cm intervals, opposite leaf pairs spanning 3 cm, and three bloom clusters of five 3 mm circles each. Check cluster-to-leaf ratio.

Answer: Main stem 12 cm; nodes at 3, 6, and 9 cm. Leaf-pair span 3 cm (30 mm). Each cluster has five 3 mm circles, sum 15 mm, within the hypothetical 10 to 20 mm range. Cluster width about 12 mm. Ratio 12/30 = 0.4, within the hypothetical 0.33 to 0.5 range. Clusters placed at main tip and two side-branch tips; gaps between cluster centers about 20 mm, leaving roughly 8 mm visible gap. All leaves attach by 5 to 8 mm stalks and cuts are shallow.
