Rat Simple Drawing: Body Shape, Ear, Snout and Tail Construction

Original worked example / unchanged complete key

Prompt: Draw a side-view rat using the construction order. Use a body oval two x-heights long and one and a half x-heights tall, a head circle overlapping by one third, a snout half the head width, an ear one third of the head height on the upper rear quarter, short tucked legs, and a tail equal to body length curving in a C shape.

Answer: The finished drawing shows a tapered body wider at the hips, a head circle overlapping the front by one third of its width, a short rounded snout with the nose slightly below the eye line, a rounded ear on the upper rear quarter, two short legs tucked under the body, and a tapering C-shaped tail starting at the rear. Construction lines are erased and the final outline is darkened.
