Draw a Rooster: Comb, Tail Feathers, and Body Construction

Topic reference / ordinary illustration

Ordinary topic reference. Hypothetical dimensions in the four tasks are supplied in their own text; this illustration is not their measured answer.

Draw a Rooster: Comb, Tail Feathers, and Body Construction

Worked example / complete source key

Draw a standing rooster using a 9 cm by 6 cm body oval tilted 20 degrees, a 3 cm head circle placed over the front third of the body, a three-bump comb, a one x-height wattle, and a five-feather tail fan spreading through 60 degrees.

Answer: The finished drawing shows a tilted body oval with the chest lower than the tail base, a head circle forward of center, a comb of three rounded bumps following the head curve, a small triangular beak with a rounded wattle below, and five curved tail feathers rising from one tail base point in a fan. The legs are two short lines from the lower body to the ground line. The silhouette reads as a rooster because the head is forward, the comb is on top, and the tail fan rises behind.
