Sharecropper Drawing: Figure, Hoe, Rows and Cabin Backdrop

Original worked example / unchanged complete key

Prompt: A learner draws a figure 12 cm tall on a 20 cm by 28 cm sheet. The horizon line is 8 cm from the top. The learner places the cabin base 2 cm below the horizon line, draws two row lines converging to a vanishing area 4 cm from the right edge, and sets the hoe handle from the upper hand to the ground. The cabin is drawn 5 cm tall. Check the cabin height against the figure and state one adjustment.

Answer: A cabin under half the figure height is acceptable for a backdrop at a distance. Half of 12 cm is 6 cm, so the 5 cm cabin passes the size check and no height reduction is needed. Check that the cabin base sits below the horizon line on the ground plane and that the row lines meet near the vanishing point without crossing earlier. If the cabin appears too large in the drawing, reduce it to about 4 cm or move it farther back; these are hypothetical example values, so measure your own sheet and adjust.
