Pasture Drawing: Fence Lines, Grazing Animals, and Ground Planes

Original tasks 1, 2 / independent work

Task 1

A student draws a horizon at 90 mm on a 180 mm-tall page. They place an animal's foot-mark at 70 mm from the top. Is the animal above or below the horizon, and what should change?

Task 2

Three fence posts are drawn with bases at 20 mm, 45 mm, and 70 mm along a guide line. Their heights are 40 mm, 32 mm, and 24 mm. Do the heights follow the convergence rule, and by how much does each shrink?

Pasture Drawing: Fence Lines, Grazing Animals, and Ground Planes

Original tasks 3, 4 / independent work

Task 3

On a 250 mm-wide page, the nearest post is 50 mm tall and the animal's body length is 60 mm. A second drawing uses a 30 mm post and a 36 mm animal. Do the two drawings use the same ratio of animal length to post height?

Task 4

A scene has the animal drawn with the darkest line weight, the nearest post with medium weight, and the distant tree line with the lightest weight. Does the layering read correctly, and what single change would improve it?
