Draw a Simple Potted Plant: Stem, Leaf, and Pot Shapes

Original worked example / unchanged complete key

Prompt: Draw a potted plant with a trapezoid pot, a single stem, and five leaves alternating sides. Use a pot top width of 6 units and bottom width of 4 units.

Answer: The drawing shows a centered trapezoid pot with a rim, a stem rising from the rim center, and five pointed-oval leaves attached alternately along the stem. The bottom pot width is visibly narrower than the top, and every leaf touches the stem.
