Drawing Ideas List: Thumbnail Practice for Concrete Objects

Topic reference / ordinary illustration

Ordinary topic reference. Hypothetical dimensions in the four tasks are supplied in their own text; this illustration is not their measured answer.

Drawing Ideas List: Thumbnail Practice for Concrete Objects

Worked example / complete source key

A student plans a sheet with twelve thumbnail boxes, each measured at 4 cm by 4 cm. In the first round, the student completes five thumbnails in three minutes each. In the second round, the student completes four thumbnails in three minutes each. Calculate the total completed thumbnails and the completion rate against the planned twelve boxes.

Answer: Total completed thumbnails: 5 + 4 = 9. Completion rate: 9 divided by 12 = 0.75, or 75 percent. The student should record both numbers and note that three boxes remain empty.
