Brazil Outline Map Drawing: Regions, Borders, and Landmarks

Original worked example / unchanged complete key

Prompt: On a fresh 10 by 10 grid of 2 cm squares, Use the official IBGE map titled “Brasil - Grandes Regiões” as the geographic reference. Copy the country outline north-up, trace the five regional boundaries along state borders where the region changes, label all five regions, and place one capital marker in each region. Describe your construction order and one check.

Answer: First transfer the outer silhouette proportionally, using the grid only to compare widths and heights. Trace an internal boundary only where adjoining states belong to different regions; label North, Northeast, Central-West, Southeast, and South. Place and label Manaus in North, Salvador in Northeast, Brasília in Central-West, Rio de Janeiro in Southeast, and Porto Alegre in South at the positions shown on the IBGE reference. Do not add radial spokes or invent coordinates.

Reason: The source is a political and regional map, so region edges follow state borders, not lines from a hub. The five named capitals are geographically located inside their corresponding regions; the grid is a transfer aid rather than a claim of surveyed coordinates.

Check: Compare the outer silhouette and relative placement of each region boundary with the IBGE map. Confirm that all five region labels appear once and that each named capital marker lies inside its listed region. Check north-up orientation and that no hub-and-spoke dividers remain.
