Hair Outline Drawing: Silhouette and Edge Practice

Original worked example / unchanged complete key

Prompt: On a head oval with a neck curve, draw a medium-length hair silhouette that reaches the jaw line. Use one continuous outer edge and one deliberate notch on the right side. Describe the result in words.

Answer: The silhouette starts at the crown, curves down the left side past the ear to the jaw, crosses under the jaw to the right side, rises to the crown, and closes. The right edge has one notch that is wider than deep. The face boundary is not crossed. The silhouette reads as medium hair because the lowest point is at the jaw, not the shoulders.
