Peace Sign Easy Drawing: Circle and Three Strokes

Topic reference / ordinary illustration

Ordinary topic reference. Hypothetical dimensions in the four tasks are supplied in their own text; this illustration is not their measured answer.

Peace Sign Easy Drawing: Circle and Three Strokes

Worked example / complete source key

A learner traces a circle with a hypothetical diameter of 10 cm. They mark the center and draw a vertical stroke from the top rim to the center. How long should the vertical stroke be, and what simple check confirms it?

Answer: The vertical stroke should be about 5 cm, because it runs from the rim to the center, which is half the 10 cm diameter. Check by measuring the stroke with a ruler and comparing it with half the measured diameter. If the stroke is close to 5 cm, the proportion is correct.
